Summary

Software Developer with a background in Computer Science and hands-on experience in backend development, machine learning, and distributed systems. Skilled in building data-driven applications and RESTful services using Java, Python, and modern web technologies. Pursuing an MSc in Distributed Systems.

Experience

Junior Software Developer, Endava June 2025 – present

- Working as part of a professional development team on enterprise-level applications
- Completed technical training covering Java development, Git workflows, Azure fundamentals, and Rulebook — a low-code platform for insurance applications
- Developing Java backend components, RESTful APIs, and relational database integrations
- Collaborating through Git workflows, CI/CD pipelines, code reviews, debugging, and testing

DevOps Intern, NTT Data July 2024 – August 2024

- Worked with Linux environments using Bash/Shell scripting for automation tasks
- Managed virtual machines and supported infrastructure-related activities
- Gained practical experience with operating systems and network monitoring tools

Java Trainee, IBM October 2020 – January 2021

- Developed a Java-based application as part of a collaborative project, applying object-oriented programming principles and software design concepts
- Practiced structured development methodologies, task planning, and teamwork

Education

MSc: Distributed Systems on the Internet, Babeș-Bolyai University October 2025 – present

BSc: Computer Science, Babeș-Bolyai University October 2022 – July 2025

- **Thesis:** Prediction of the evolution of forest areas in Romania – Developed machine learning models for forecasting forest area changes using historical and geospatial data

Projects

Insurance Management REST API 2026

- Developed a Spring Boot REST API for managing insurance policies, clients, buildings and brokers using PostgreSQL, layered architecture, JWT authentication, and role-based authorization with Spring Security
- Implemented automated unit and integration testing using JUnit and Mockito, achieving **92%** test coverage, while integrating Swagger/OpenAPI documentation and SonarQube code quality analysis

Forest Area Prediction Web Application 2025

- Developed a full-stack application for predicting forest area evolution using machine learning models
- Implemented backend services (Node.js + Python) to process data and generate predictions
- Integrated GeoJSON visualization using OpenLayers for interactive map display

Skills

Programming Languages: Java, Python, JavaScript, Kotlin, SQL, C#, C, C++

Frameworks & Technologies: Spring Boot, Node.js, React, OpenLayers

Cloud & DevOps: Microsoft Azure, AWS, Docker, CI/CD, SonarQube, Git, Linux (Bash/Shell)

ML & Data: Scikit-learn, Pandas, NumPy, regression models, geospatial data analysis

Systems & Other: Parallel Programming (MPI, OpenMP, CUDA), GIS, Test Automation

Languages: Romanian (native), English (C1), German (B1–B2)
